

IT8
YOUR ENGINEERING PARTNER

Environmental Policy.00

IT8 Engineering carries out its activity in the sphere of:

“Services in engineering, construction and machinery manufacture, mechanical and electrical installation, measurement services, manufacture control, in the automation, aeronautics, energy and railways sectors.”

The whole organisation assumes responsibility as an important element of its management for the continuous improvement of its processes, with the aim of maintaining a responsible environmental behaviour towards its surroundings and society. To achieve this, Senior Management has created the current Environmental Policy which can be summarised with the following principles:

- ✓ A commitment to convey the continuous improvement of its processes and to prevent the contamination that these may cause to the whole organisation, through implementing and maintaining an Environmental Management System which guarantees this commitment.
- ✓ Establishing environmental objectives and targets which are consistent with this Policy, that allow for the control and improvement of these processes as well as preventing and minimising the actual and potential environmental impacts of our activities.
- ✓ A commitment to reducing and optimising the consumption of natural resources as a contribution to environmental conservation.
- ✓ Compliance with applicable legislation and regulation for carrying out our activities, and with the binding environmental management, by establishing the necessary environmental measures for this.
- ✓ Acting decisively when faced with significant incidents which may affect the environment, through the application of preventive or corrective behavioural actions and verifying their efficacy.
- ✓ Promoting awareness-raising within our organisation, our clients, providers and other collaborators in observing the principles established in the current Policy.
- ✓ Maintaining an open and collaborative relationship with public bodies, other companies in our surroundings and interested groups towards policies and actions which support the protection and conservation of the environment.

The Management at IT8 Engineering is committed to making this Environmental Policy being understood and adopted by our organisation and by our collaborators, and to ensuring its application by making the necessary resources available for this purpose, as well as by periodically reviewing its content in order to adapt it to the nature of the activities and impacts that may be generated.
