# Information security policy.oo

**IT8 Engineering** is a company that has established and implemented an Information Security Management System based on the ISO 27001:2013 standards, that commits to:

✓ Ensure the confidentiality, integrity and availability of information.

✓ Comply with all the requirements and needs of our clients, both those of a legal nature in the field of information security that affect us, as well as others that the organisation may have a contract with.

✓ Ensure adequate protection, preservation and safeguarding of information and corporate systems, responding to the interests and needs of our clients.

✓ Manage risks in relation to information security that facilitate the identification, assessment and implementation of controls, monitoring and tracking risk levels.

✓ Provide training and resources to our employees to actively collaborate in the development and continuous improvement of the company.

✓ Establish a series of objectives that guarantee information security and review them annually.

The Management at IT8 Engineering, as well as all the organisation's staff, are aware of the importance of this policy and integrate it into their work dynamic. The management takes the necessary measures in order for it to be widely used at all levels, reviewing it periodically whilst its being continually adapted and published for those that are interested.
